RANGE UPDATE: phasing out models LP 16 and MP 120

TECHNICAL TIPS

EURO COLD TECHNICAL AND COMMERCIAL BULLETIN

N. 01/14 – 12/05/2014

Euro Cold Srl, in updating its line of products and in order to constantly improve the performance, flexibility, aesthetics and compactness of its machines, wishes to inform its customers, current and potential, of some changes to the product range.

Please note that we will gradually eliminate models LP 16 and MP 120, both in water and oil versions, which will be replaced with models LP 25 and MP 160 respectively. This has been possible since technical developments have allowed us to create more efficient chillers with the same overall dimensions.

The considerations above will be valid even for ECF models (customised according to customer requirements), which have similar power to sizes "16" and "120".

Any commercial agreements still valid for the models being phased out will be valid for the models that will replace them in view of a new negotiation or commercial offer.

Please take note of this information and contact our technical or sales department for any clarification.
